## COURSE OVERVIEW

**Video improves all surveillance operations!**

Students who complete this course will be ready to record evidence-grade video during physical surveillance operations. Participants will learn how to navigate the challenges of recording uncontrolled action, how to establish—on video—the date, time, and location of surveillance, and what additional equipment is required in the field.

Participants learn techniques to safely record video of stationary and moving surveillance subjects to establish pattern-of-life and record criminal activity. These techniques can be used immediately with camcorders, DSLR or mirrorless cameras, and cell phones.

## WHO SHOULD ATTEND

This course is ideal for military, law enforcement, and public safety professionals, jail and correctional facility employees, school and campus security personnel, and independent investigators.

## COURSE TOPICS

- Surveillance camera and equipment selection
- Recording surveillance with manual focus
- Establishing location, date, and time of surveillance
- Using the elements of video continuity to safely and effectively record surveillance video
- Surveillance video of stationary subjects
- Surveillance video of moving subjects
- Employing high speed shutters
- Eliminating audio from surveillance video
- Camera stabilization, monopods, and mounts
