COURSE OVERVIEW

Surveillance at night? Surveillance from a mile away? No problem!

Investigators learn to record video surveillance in difficult conditions: nighttime and from extreme ranges.

Participants learn how to effectively record evidence-grade surveillance video at distances greater than two miles using long-range lenses for DSLR and mirrorless cameras and camcorder digital zoom capabilities.

Students will then learn four different ways they can possibly use their cameras in low-light and no-light conditions. They will also see demonstration video from both low-cost and high-end night recording devices and learn how to use infrared lights and beacons as tools for night surveillance and investigator safety.

WHO SHOULD ATTEND

This course is ideal for military, law enforcement, and public safety professionals, jail and correctional facility employees, school and campus security personnel, and independent investigators.

WEBINAR TOPICS

- Equipment for night recording and extreme-range surveillance
- Comparison of optical, zoom, digital zoom, and telephoto lenses
- Best practices for extreme long-range surveillance video
- Camera and lens stabilization
- Four ways to record video in low-light and no-light situations
- Recording with binoculars, monoculars, and optics
- Night surveillance with infrared lights and beacons
